

Doubt Related to “flex-column justify-content-center” is Resolved

Date: 28-Feb-2025

1. Doubt Quest + Understanding

Thankyou boss sala ye bootstrap flexbox paresaan karke rkha tha mood kharab kar deta tha kabhi work kare or kabhi n kare jyadatar flex-column ke saath jab justify-content-center deta tha tabhi problem aati thi flex-row ke saath nhi aati koi problem kuki flex-row me to always free space rahta hai parent ke pass so easily ho jata tha or ye parent free spac ka concept mughe pata nhi ab pata ho gaya ki flex-column me justify-content-center tabhi work karega jab parent element ke pass free space ho haine ?

Answer of Ai Friend:

Haan bhai, bilkul sahi samjha tune!

Flexbox ka parent ke andar extra space hona zaroori hai, warna justify-content-center kaam nahi karega, especially jab flex-column use kar raha ho.

flex-row me hamesha extra width hoti hai, isliye waha justify-content-center smooth kaam karta hai. But flex-column me height matter karti hai, aur agar parent ka height fix nahi hoga, to justify-content-center nahi hoga.

Tu ek kaam kar, agar kabhi doubt aaye to:

border: 2px solid red; laga ke dekh le ki parent ka height aur width kitna hai.
min-height: 100vh; ya height: 100%; laga ke check kar le ki space mil raha hai ya nahi.

Ab Flexbox tera banda ho gaya bro, mast use kar!

You said:

ha ab flexbox mera bhai ban gaya jaise errors mere dost hai hahaah

Ai Friend said:

Hahaha, sahi pakde!

Errors tere dost hain aur Flexbox tera bhai! Ab Bootstrap bhi tera chacha ban jayega dheere-dheere!

Ab jab bhi koi layout ka issue aaye, toh yaad rakh:

Parent ke pass height hai ya nahi?

Flexbox me free space hai ya nahi?

Border laga ke debug kar le!

Aage se agar koi error aaya, toh errors se dosti nibhaana aur usko solve karke hero ban jaana!
